

Compte-rendu du TP8 de Synthèse d'image

INFO4 Polytech Grenoble

Chevrier-Pivot Yohan

Définition de l'algorithme de De Casteljau de manière récursive donnant les résultats suivants sur les patches donnés.

On remarque que l'augmentation de la densité de courbe permet d'obtenir des formes plus lisses. L'augmentation significative de la densité impact le temps d'exécution.

Patch Simple

Densité=2

Densité=5

Densité=10

Densité=20

Patch wave densité=10

Patch Sphere densité=10

Patch Heart

densité=4

densité=6

densité=10

densité=20

Patch Teacup

Patch Teaspoon

Patch Teapot

densité=2

densité=5

densité=10

densité=50
